
a
memory capacity
r = 0.95
stable rank r_s
b
r with MC
⟨C_{ii}⟩ up to order n
walk order n of Tr $\tilde{W}^n$
c
topology
order 2
higher orders
all orders
linear response
spectrum
within cohorts
given r_s
mean degree
strength factor G
disparity ratio
disparity factor L
stable rank r_s
order 3 (Tr $\tilde{W}^3$)
order 4 (Tr $\tilde{W}^4$)
subgraph centrality
communicability
linear attenuation
SAR covariance
average controllability
eigenvalue entropy
correlation with memory capacity
d
G
D
L
all
dHCP
BCP
CALM
RED
ACE
HCPd
HCPya
camCAN
HCPa
share of var(log r_s)
e
stable rank
r with MC
SAR covariance
Gramian (avg. control.)
coupling α (1 = critical)
f
predicted from r_s
ΔMC (null – real)
Uniform
Broken stick
Reshuffle
Equal strength
Interhem. weights ×½
