
development
aging
a
MC
age (years)
$\langle \Upsilon / \Upsilon_{null} \rangle$
b
r = 0.95
r = 0.93
MC
stable rank r_s
c
stable rank
subgraph centrality
communicability
disparity ratio
strength
degree
avg. controllability
r with MC
d
partial r | r_s
e
ΔMC (null − real)
predicted
Uniform
Broken stick
Reshuffle
Interhem. halved
Interhem. equalised
f
between hemispheres
within a hemisphere
L
R
newborns
between: 18%
MC 11.5
30-40 years
between: 65%
MC 9.6
76 years or more
between: 18%
MC 10.7
g
real
interhem. equalised
homotopic equalised
MC
age (years)
